

# Lazy Builder Mod v1.16.3-beta

## WHAT CAN YOU DO WITH THIS?

- **Build** huge structures quickly
- **Copy & Paste** any structure you like (extremely large structures may not be properly copied because it will take too much memory. Split them into smaller pieces).
- **Undo** your building mistakes just pressing a key
- **Protect** your buildings
- **Destroy** any structure or **Wipe** any area
- Create a “**magic column**” under your feet to help you build high structures or rapidly escape from mobs

## BUILD

Start Block: Determines where the Structure begins

8 - Cobblestone Blocks  
1 - Cactus Block

- Intermediate Block: Used to shape the structure.
- The first Intermediate Block will look like this. This block will determine the height of the Structure (place it at the same height than the Start Block for Horizontal Structures)

8 - Cobblestone Blocks  
1 - Gold Ingot

End Block. Sets the end of the Structure and, when activated, will trigger the action.

8 - Cobblestone Blocks  
1 - Redstone

To start building, you must place your building blocks inside the Start (green) Block. It works like a Chest, but will only admit Blocks.

When filled, activate the End (red) Block to start building.

*One-Line* ( 1  - 1  )

*A Wall* ( 1  - 1  - 1  )

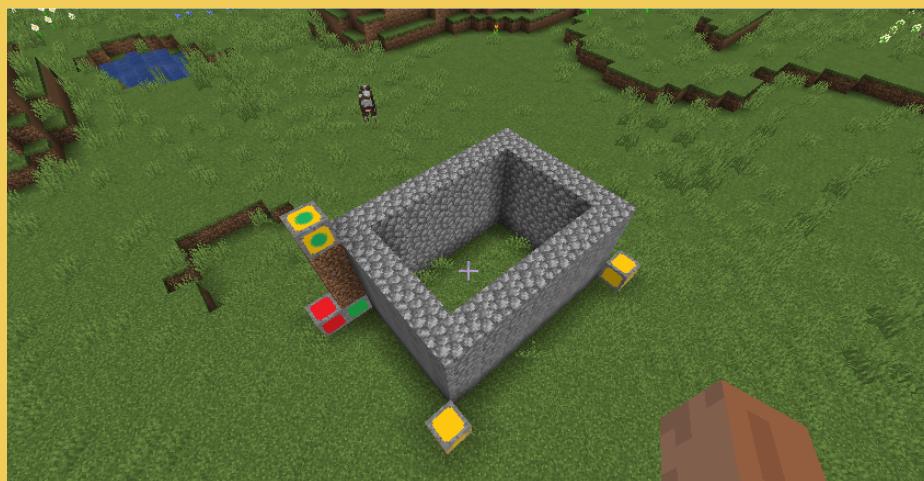

*Two walls* ( 1  - 2  - 1  )

*Three walls* ( 1  - 3  - 1  )

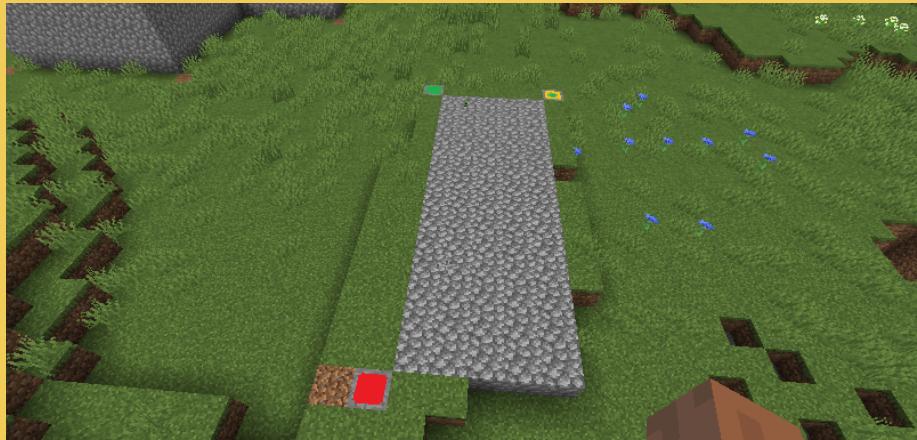

*4 Walls - Closed Structure* ( 1  - 4  - 1  )

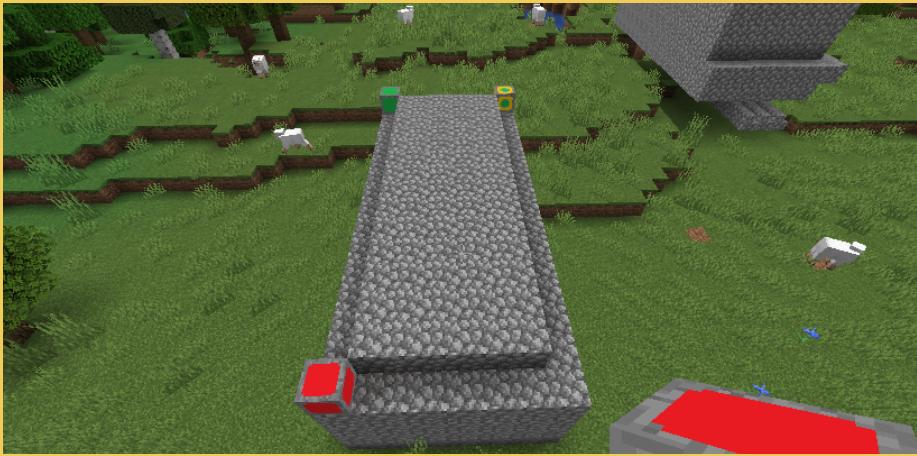

*Complex Structure* ( 1  - 4+  - 1  )

*Horizontal Structure, a floor (First Intermediate Block / Height = 0) ( 1  - 1  - 1  )*

*Horizontal Structure, a roof (First Intermediate Block / Height = 0) ( 1  - 1  - 1  )*

### *Magic Column*

Right-click on the Start (green) Block when standing right on it and sneaking. It will generate a 10-Dirt-blocks column which can be very useful to build or quickly escape from mobs if you need to.

## COPY & PASTE

- Copy&Paste Block: Sets where the Structure to Copy or Paste begins

8 - Cobblestone Blocks  
1 - Lapis Lazuli

To Copy a Structure, you must place some Items and Blocks which will be used to fuel the Copy process. It will require 1 Item for every 20 non-air blocks.

Will accept:  
- Gold Ingots  
- Emeralds  
- Redstone Blocks

Did you always want to live in a Desert Pyramid or a Pillager Outpost?

- Set the Copy&Paste (blue) Block as your Start Block.
- Use End (red) Block to delimit the structure within a 3D-Cube (width, height and length)
- Fill the Copy&Paste (blue) Block with enough items (it will require 1 item every 20 non-air blocks)
- Activate the End (red) Block

Copy a Structure( 1  - 1  )

If COPY worked, you will see a nice glowing effect which indicates the Copy&Paste (blue) Block is Loaded:

Harvest it, so you can place it anywhere. When placed, you will see some lines indicating where the structure would be placed if you activate the Paste action (remembering its original position is important to paste it properly).

Press “R” to rotate the whole structure (you will see the line indicators rotating too), in order to set the structure at your convenience..

Activate it by right-clicking on it when sneaking, and the Structure will be automagically PASTED!!!

If you don't want to PASTE anything, you can reset the Structure by Left-Clicking the Copy&Paste (blue) Block while sneaking, but be aware you will not recover the items used to copy the structure.

## UNDO

Did you make a mistake when placing or breaking a Block you didn't want to? Fear not. You now have the UNDO feature at your reach, by simply pressing **CONTROL-Z** (up to 50 actions back).

There are a few rules:

- Only Block-break and Block-place actions are allowed to undo.
- To undo a Block-break you need to have that block in your inventory.
- When you undo a Block-place, the block will be dropped so you don't lose it.

## DESTROY

 Destruction Block. Sets where the area to wipe begins.

Do you need to wipe an area to place your structures, get rid of water or lava, or just delete something you don't want?

- Use the Destruction (black & yellow) Block as your Start Block.
- You don't need any item to make it work, but be aware it will generate no drops!
- Use End (red) Block to delimit the structure within a 3D-Cube (height, width and length)
- Activate the End (red) Block

Wipe an area (1  - 1 )

## PROTECT

① Protection Block. Sets the center of the protected area.

8 - Cobblestone blocks

1 - Ink sac

Do you want to avoid other players, creepers or explosions to break your structures?

- Place the Protection Block at the center of the area you want to protect
- Fill it with diamonds and/or emeralds
- It will protect an spheric area with a radius of 3 blocks per item (max. 30 blocks radius)
- You can place as many Protection Blocks as you need, but you have to fill them separately, with the appropriate number of items to set the protection range you need

Sneak-Activate your Protect Block to show the range of your protected area.

Protect an area (1 ①)

**DID YOU LIKE IT?**

In case you didn't, you may like to kiss this...
